

# Instructions For Use

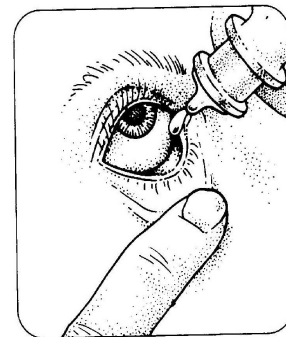

## Eye Drops

### ■ What are eye drops and how to use them?

Eye drops are liquid forms of medication that are used to deliver many different types of drugs into the eyes.

### ■ How to use eye drops

1. Wash your hands and dry them with a clean towel.
2. If you're wearing eye contacts, remove them before use unless told otherwise.
3. Tilt head back and pull your lower eyelid downwards to form a pocket.
4. For eye drops, hold the dropper tip directly over the eyelid pocket and squeeze the bottle gently to let the eye drop fall into the pocket.
5. Gently close your eyes and try not to blink your eyes.
6. Apply gentle pressure around your tear ducts, the area where the eyelids meet the nose.
7. Wash your hands.

### ■ Precautions

1. Do not wash the bottle or bottle tip with water.
2. Do not use if the medication has changed color.
3. Do not make contact between the bottle tip and your eyelid or eyes to prevent contaminations.
4. Shake gently before use when using suspensions.
5. When using more than one eye products at the same time, wait at least 5-10 minutes before applying each type for better therapeutic effect.
6. When applying both eye ointment and eye drop, use the eye drop first before applying the eye ointment, wait 5-10 minutes in between.
7. Store your eye medication in dry and cool places, avoid direct sunlight and out of the reach of children.
8. Some eye drops can affect ability to see, wait until you can see properly before driving or using machines that require care.
9. If your condition worsens after medication or you feel heat and pain after application, contact your doctor immediately.
10. Unless told by the doctor or pharmacist, you do not need to store eye drop in the refrigerator.
11. Throw away unfinished eye drop a month after opening.
