

Instructions For Use

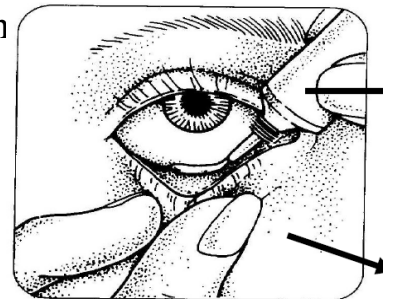

Eye Ointments

■ What are eye ointments and how to use them?

Eye ointments are semisolid forms of medication that are used to deliver many different types of drugs into the eyes.

■ How to use eye ointments

1. Wash your hands and dry them with a clean towel.
2. If you're wearing eye contacts, take them out. Unless, told otherwise.
3. Tilt head back and pull your lower eyelid downwards to form a pocket.
4. Hold the tube tip directly over the eyelid pocket and squeeze around 0.5 to 1 centimeter of ointment into the eyelid pocket.
5. Close your eyes and roll them to help the eyes absorb the n
6. Wash your hands and clean the tube tip with clean tissue.

■ Precautions

1. Do not wash the tube with water.
2. Do not touch the tube tip to eyelid or eyes prevent contaminations.
3. When using more than one eye products at the same time, wait at least 5-10 minutes before applying each type for better therapeutic effect.
4. When applying both eye ointment and eye drop, use the eye drop first before applying the eye ointment 5-10 minutes later.
5. Store your eye medication in dry and cool places, avoid direct sunlight and out of the reach of children.
6. Some eye medication can affect ability to see, wait until you can see properly before driving or using machines that require care.
7. If your condition worsens after medication or you feel heat and pain after application, visit the doctor immediately.
8. Unless told by the doctor or pharmacist, you do not need to store eye ointment in the refrigerator.
9. Throw away unfinished eye ointment a month after opening.
