

Non-vitamin K antagonist oral anticoagulant (NOAC) 停藥原則

FOR ELECTIVE OR PLANNED PROCEDURE

此原則不適用於 *urgent procedure*

Step 1: 評估手術/處置的出血風險 (Table 1)

Table 1. Elective procedures 的出血風險

Bleeding risk	Types of procedure
Minor	<ul style="list-style-type: none">• Cataract or glaucoma intervention• Dental interventions• Endoscopy without biopsy or resection• Superficial surgery (e.g. abscess incision; small dermatologic excisions)
Low	<ul style="list-style-type: none">• Angiography• Electrophysiological study or catheter ablation• Endoscopy with biopsy• Pacemaker or ICD implantation (unless complex anatomical setting, e.g. congenital heart disease)• PCI via radial artery• Prostate or bladder biopsy
High	<ul style="list-style-type: none">• Abdominal or pelvic surgery• Cardiothoracic surgery• ERCP with sphincterotomy• Extracorporeal shockwave lithotripsy• Kidney biopsy• Liver biopsy• Major orthopaedic surgery• PCI via femoral artery• Polypectomy• Spinal or epidural anaesthesia; lumbar diagnostic puncture• Transurethral prostate resection

Step 2: 確認病人腎功能及使用哪種 NOAC, 以決定停藥時間 (Table 2 & 3)

- 腎功能差者應停藥較久 (特別是 Pradaxa, 因其經腎臟排除比率較高)。
- 由於 NOAC 具有穩定的藥物動力學特性, 故一般而言停藥期間不需要使用 low molecular weight heparin 作為 bridging therapy。若病人最近六星期內有發生 systemic embolism, 則可考慮使用 bridging therapy。
- Minor bleeding risk procedure: 一般而言不需要術前停藥, 服藥後 12 小時即可進行手術。可於術後 6 小時恢復使用 NOAC。

Table 2. Dabigatran (Pradaxa®) 停藥時間

	Low bleeding risk procedure	High bleeding risk procedure
CrCl ≥ 80 mL/min	≥ 24 hr	≥ 48 hr
CrCl 50–79 mL/min	≥ 36 hr	≥ 72 hr
CrCl 30–49 mL/min	≥ 48 hr	≥ 96 hr

備註: Dabigatran 不適合使用於 CrCl < 30 mL/min 的病人

Table 3. Rivaroxaban (Xarelto®), Apixaban (Eliquis®), Edoxaban (Lixiana®) 停藥時間

	Low bleeding risk procedure	High bleeding risk procedure
CrCl ≥ 80 mL/min	≥ 24 hr	≥ 48 hr
CrCl 50–79 mL/min	≥ 24 hr	≥ 48 hr
CrCl 30–49 mL/min	≥ 24 hr	≥ 48 hr
CrCl 15–29 mL/min	≥ 36 hr	≥ 48 hr

備註: Rivaroxaban, Apixaban, Edoxaban 不適合使用於 CrCl < 15 mL/min 的病人

Step 3: 評估術後開始使用 NOAC 的時機 (Table 4)

Table 4. When to restart NOAC after invasive procedure

Bleeding risk of procedure	Restart timing
Low	Post-op ≥ 24 hr
High	Post-op ≥ 48–72 hr
