## Answer: Femoral head avascular necrosis

Ficat classification, combination on pain film, MRI

- stage 0 <u>X-ray</u> : normal <u>MRI</u> : normal
- stage I
   X-ray
   : normal or minor osteopaenia

   MRI
   : edema

Bone scan : increased uptake

- stage II
   X-ray
   : mixed osteopenia &/or sclerosis &/or subchondral cysts

   MRI
   : geographic defect

   Bone scan : increased uptake
- **stage III** <u>X-ray</u> : <u>crescent sign</u> (subchondral lucency) & eventual cortical collapse <u>MRI</u> : same as X-ray
- **stage IV** <u>X-ray</u> : end stage with evidence of secondary degenerative change <u>MRI</u> : same as X-ray
