

Taipei Medical University Hospital

Post-Polypectomy Instructions (including Endoscopic Mucosal Resection)

- Please avoid eating high-fiber foods for 1 week.
- Please avoid anti-coagulant agents for 1 week.
- If you have severe bloody stool, accelerated heartbeat, abdominal pain, or a fever, you should come immediately to our hospital's emergency department for further medical diagnosis and treatment.
- Please avoid partaking in strenuous exercises, hiking, and carrying heavy things, including holding a baby/child, for 1 week.
- If you receive a chromoendoscopy check and has blue stool after two days, the situation is stable and normal and you should not worry.
- Please avoid travelling abroad post-polypectomy within the first week, especially in order to prevent surgical complications.
